

## Care and Maintenance

To remove everyday dirt, sweep, dust or vacuum the floor.

To clean, use warm water and a slightly damp mop then lightly buff the surface dry if your area has hard water as the water may leave spots. Wipe away spills with a cloth.

*Remember: Laminate floors are non absorbent; therefore they should never be waxed, polished or refinished.*

Additional tips:

- Use protective felt liners under furniture legs.
- Always wipe up spills promptly.
- Never use abrasive materials, soap, or detergent as they will dull the surface.
- Never slide furniture or appliances across your floor.
- Place mats at all outside entry doorways, (both inside and outside), to trap sand or grit before it reaches the flooring surface.
- Do not use a steam cleaner or other apparatus that may cause topical moisture on your floor.
